Unit8™

Gen**AI** Accelerator

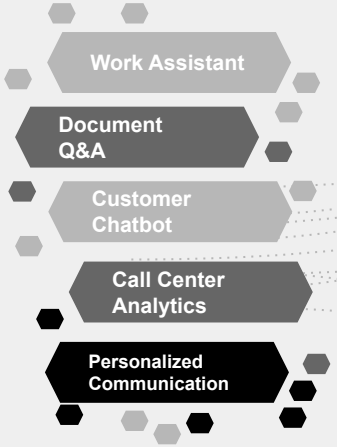
Unit8 GenAI Accelerator

deploys the infra and code on Azure that powers your GenAI use-cases

- **Start delivering in days**
- A **secure** environment designed for data privacy
- **Expert know-how** built-in
- **Fully customizable** & open solution

Microsoft Gold Partner

Unit8



A scalable and secure GenAI infrastructure

1-3 day(s)

Deliver your first prototypes in a matter of days

3 weeks

Reduce your time-to-delivery by 3 weeks

100+ projects

Secured and strong foundation built on the expertise of 100+ project in cloud, data & AI

Setting the **right foundation** for generative AI use-Cases is **essential for quickly iterating and delivering value**

Cross-Expertise Requirements

Generative AI projects inside companies demand combining knowledge and best practices across cloud, machine learning, data engineering, and software engineering.

Security Concerns

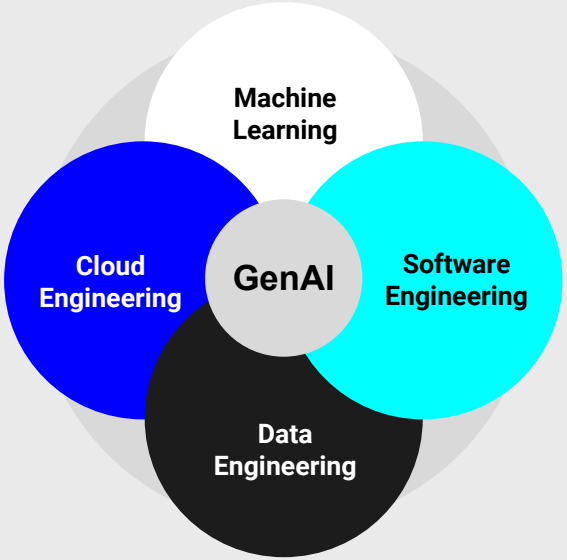
Off-the-shelf projects often overlook crucial security aspects necessary for corporate environments.

Ensure a scalable and versatile foundation

Many available solutions only address 1 single use-case and have not been designed to be versatile enough to pivot to other use-cases easily

Enable rapid iterations

Many available solutions online are built as quick prototype making it challenging for businesses to quickly iterate over, manage and maintain.

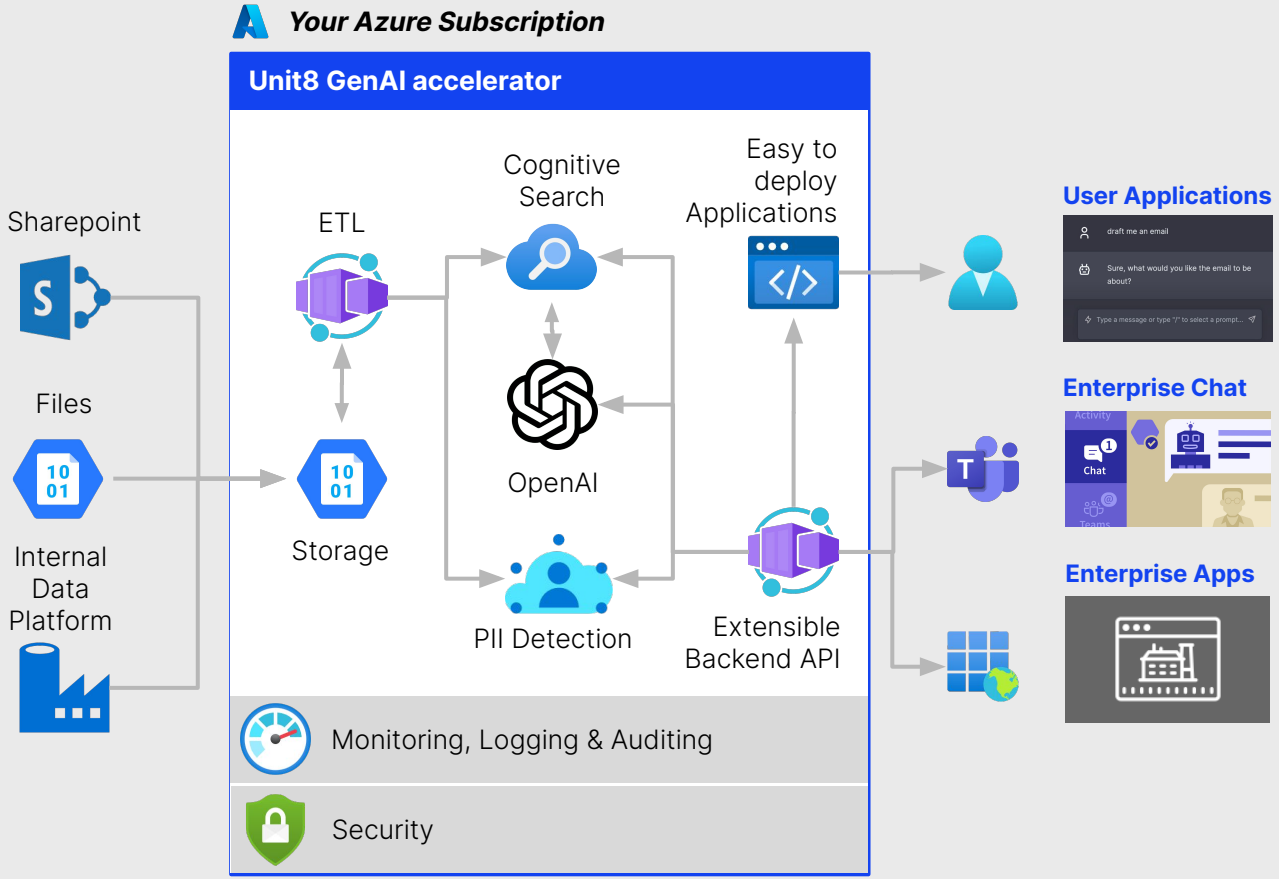


Generative AI sits at the intersection of multiple disciplines

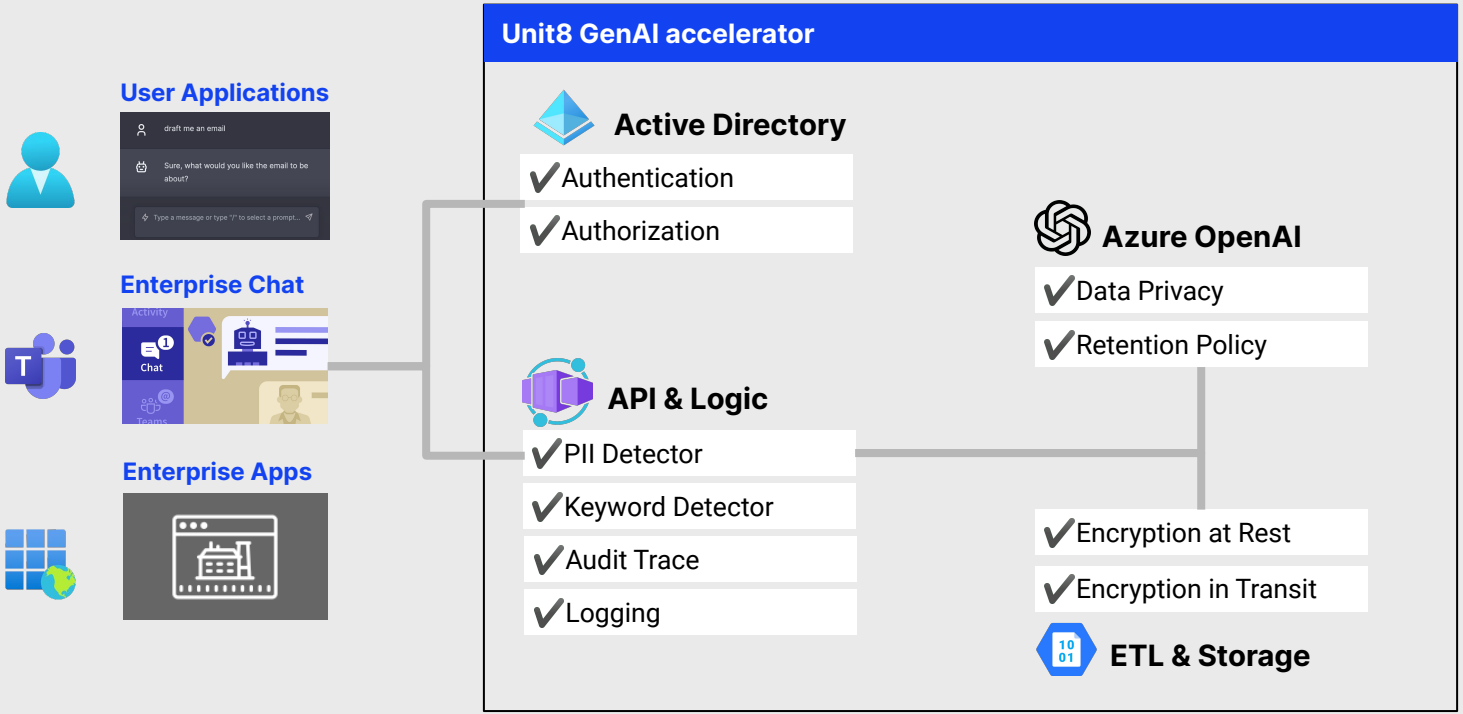
Deploy a comprehensive generative AI infrastructure in minutes

The solution runs fully within your Azure subscription providing full control and customization options

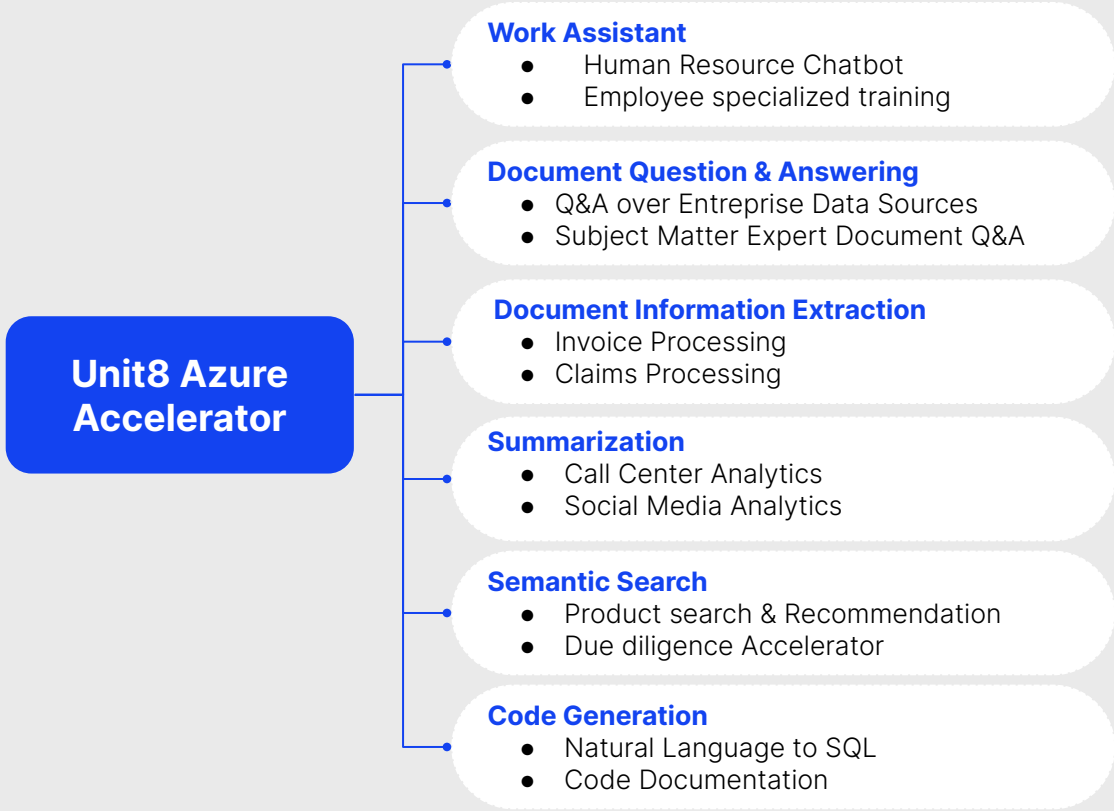
- Configurable OpenAI or Open-source models
- Secured environment following best-practices
- Search engine to retrieve relevant documents
- Extensible backend (API) to power use-cases
- A collection of well-engineered prompts for many use-cases
- Integrate easily with Sharepoint and Teams



Ensure a **strong and secure infrastructure** for your company



Scalable & extensible foundation for a large variety of Large Language model use-cases



Connect your data to the solution using sharepoint or connect your existing datastack

Serve models via applications or integrate to existing Entreprise chat or application via the API
